NEWS RELEASE

ROXMARK PREPARES TO MILL GOLD FROM EAST LEITCH SURFACE SAMPLE

Toronto, Ontario, September 2, 2005 — **Roxmark Mines Limited** today announced that it has completed the previously announced surface sampling at its East Leitch gold property and extracted an estimated 800 tons of ore which it will mill at its onsite permitted facility beginning September 6, following fine tuning of the recovery circuit.

The tonnage to be milled is 25% less than the amount called for in the Company's operational plan because this vein was considerably more faulted and structurally complex than anticipated.

Preparations are also underway for surface sampling of an initial 3,000 tons of molybdenum ore from the Nortoba-Tyson property which, weather and regulatory approvals permitting, could be milled before the end of the year.

Both programs are designed to help assess mineral resources and to provide cash flow to further exploration and development.

“We are disappointed that the 2005 operational program has experienced delays, but we remain optimistic about Roxmark's future,” said Phil Cunningham, Chairman. “At this point, a late arrival of winter will be our best friend. But if snow arrives early, we will be well positioned to recommence in the spring.”

A comprehensive assay is still underway following this summer's 24 hole large-diameter drilling program at Nortoba-Tyson. Objectives of the drilling and proposed underground bulk sampling are to help confirm the size and grade of the ore body—and to provide essential data to allow engineers to develop the most cost-effective mining approach from underground.

Roxmark's current plans call for underground development of molybdenum via a 1250-foot decline and subsequent sill drift beginning in the spring of 2006, following receipt of all regulatory approvals. Work is already underway on surface facilities at the decline location and on further access road improvements.

About Roxmark

Roxmark Mines is a Canadian-based junior integrated gold mining company involved in exploration and development of gold and molybdenum properties in the Geraldton-Beardmore area of Northern Ontario. Roxmark assets include an important new molybdenum project, a fully-permitted mill, and six formerly highly producing gold

mines which generated nearly two million ounces of gold production from high grade ore. Existing infrastructure above and below ground at these mines will provide important advantages in developing newly discovered parallel gold structures. Roxmark's common shares are listed for trading on the Canadian Trading and Quotation System Inc. ("CNQ") under the symbol RMKL. Further information is available at www.roxmark.com.

Forward-Looking Statements

This news release includes certain "forward-looking statements". All statements regarding exercise of warrants, potential mineralization, resources, exploration results, completion of program dates, amounts and future plans are forward-looking statements that involve risks and uncertainties including, but not limited to, political risk, title risk, commodity price and currency exchange risk, operating and environmental hazards encountered in the mining business, general industry and economic conditions, change in regulatory requirements, future capital expenditures and the availability of financing. The results or events predicted in these forward-looking statements may differ materially from actual results or events. Historical results of operations and trends that may be inferred from the discussion and analysis may not necessarily indicate future results from operations.
