

## **ROXMARK MINES LIMITED NEWS RELEASE**

### **ROXMARK ANNOUNCES FURTHER DRILLING RESULTS AT NORTHERN EMPIRE GOLD MINE PROPERTY**

---

**Toronto, Ontario, July 13, 2007.** Roxmark Mines Limited (TSXV – RMK) (CNQ – RMKL) today announced assay results for an additional three drill holes of its 26-hole surface diamond drilling program on the Northern Empire Mine property.

The program was completed on July 11, 2007 for a total of 2,803 metres. The remaining holes will be announced as assays are completed.

All three holes intersected the targeted Power and Contact zones, with mineralization persisting over a strike length of 212.5 metres. In addition to the two zones, holes have intersected another zone below the Contact zone, which has been named the Footwall zone. This is different from the other zones that were intersected earlier and appears to be a quartz stringer zone. Several assays are pending. Results will be announced in due course.

<b>Section</b>	<b>Hole Number</b>	<b>From (m)</b>	<b>To (m)</b>	<b>Width (m)</b>	<b>Gold g/tonne</b>	<b>Zone Intersected</b>
7 + 87.5 E	07-08	92.00	93.43	1.43	20.57	Power
		105.90	108.00	2.10	8.23	Contact
8 + 12.5 E	07-11	89.47	92.00	2.53	16.80	Power & Contact
8 + 37.5 E	07-15	64.88	65.25	0.37	5.01	Power
		78.23	79.93	1.70	25.20	Contact

“These latest results continue to demonstrate that mineralization exceeds that of zones previously mined at the Northern Empire,” said Monir Younan, Roxmark President. “In addition, they confirm our expectation that ore grades improve in the Power and Contact zones as we continue to move west in the drilling program.”

Results presented in this news release have been reviewed by the Qualified Person, Peter Bevan, P.Eng. The drilling program employs a Quality Assurance/Quality Control program consistent with NI 43-101 and best industry practice. The NQ-sized core is logged, sampled and split. The samples are recorded, bagged and sent out to SGS

Lakefield Research Limited and Swastika Laboratories Ltd. Samples are analyzed for gold by FA methods. To date, some minor check sampling has been carried out and more is being planned together with some blanks and two standards of gold ores.

The Northern Empire Gold Mine property is located in Beardmore, Ontario. Historically, the Northern Empire Mine produced 149,053 ounces of gold from 425,866 tons with a recovery of 0.35 oz. in gold per ton. The mine was serviced by a shaft to 2,460 feet with development above and below a major flat diabase sill. Existing infrastructure on the property, including an upgraded and fully permitted 200 tpd mill (expandable to 500 tpd), as well as the mine's non-remote location will reduce the cost of future development. The mill processes efficiently both gold and molybdenum ores.

### **About Roxmark Mines**

Roxmark Mines Limited is the leader in gold and molybdenum exploration and development in the historically significant Geraldton-Beardmore area of Northwest Ontario. Roxmark has generated cash flow from bulk-sampled gold and molybdenum processed at its fully-permitted mill and has the advantage of infrastructure from six formerly highly productive gold mines located on its properties. These mines previously produced nearly two million ounces of gold from high grade ore but were closed primarily due to dramatically lower gold prices at the time and to boundary issues, eliminated by Roxmark's consolidation of key properties.
